Results of the coordinated annual survey of investment in industry for 1984

(Council Directive 64/475/EEC of 30 July 1964)

The results of the coordinated annual survey of fixed capital investment are published annually together with the most important results of the coordinated annual survey of industrial activity. This publication (Structure and activity of industry - Main results) sets out to cover the Member States as completely as possible, one of the results being a certain loss of topicality, especially as regards the results of the investment survey.

EUROSTAT would like to counteract this disadvantage by publishing the results already available from the 1984 investment survey. Unfortunately, data for Italy, Ireland and Greece are not yet available.

An analysis of the sum of the seven Member States for the manufacturing and processing industry between 1980 and 1984 indicates in ECU only a modest increase in investment of the order of some 12% in current values (see Table 1). Certain noteworthy aspects would seem to be the sharp decline in nominal investment in Luxembourg (-29%), stagnation in France (+0.5%) and an unusually sharp rise in Denmark (+40%) and the Netherlands (+36%). Compared with the previous year, 1984 saw a slightly higher level of investment (+4.5% for all countries), the leaders here being the Netherlands (+36%), Denmark (+29%) and the United Kingdom (+12%). On the other side of the coin, nominal investment expenditure was down in Luxembourg (-8%), France (-3%) and the F.R. of Germany (-1%).

1984	81	86	73	79	82	87	84	84	

Based on national account data, an estimate for the manufacturing and processing industry for 1980 to 1984 indicates a decline in volume terms for the seven Member States as a whole of over 8%, ranging from particularly sharp declines in Luxembourg (more than 25%), the United Kingdom and the F.R. of Germany (15% in both cases) to vigorous growth in Belgium (+ approx. 10%).

Any evaluation of investment activity is severely hampered by developments in the leasing sector, which has seen substantial growth in almost all the Member States over the past 10 years. The reasons for this trend differ from country to country, but can be traced back in the main to taxation, finance and business policy considerations. According to estimates published by T.M. Clark in the World Leasing Yearbook 1985 (p. 19), leasing as a percentage of total investment developed as follows:

Table 3: Leasing as a percentage of total business investment

	B	DK	D	E	F	IRL	I	L	NL	UK	USA	Japan	%
1978	2,6	1,3	2,0	2,5	6,8	0,5	4,7	0,5	4,7	8,0	15,6	4,8	
1982	4,6	8,3	3,0	4,5	8,5	2,0	6,8	5,1	5,1	13,0	27,9	8,3	

A more detailed analysis by branches of economic activity reveals even bigger differences, so much so that simply looking at investment series might lead to false conclusions. To take an example from the results for France from the 1984 survey:

Table 4: Leasing as a percentage of all investment in France by branch of economic activity (NACE) (1) for 1984

MAN	31	32	453/456	461/465	466	473/474	483
7,3	14,6	13,3	11,1	12,3	11,0	25,3	11,2

(1) See annex for explanation of codes.

To deal with this pressing problem and to facilitate a realistic interpretation of the results of the coordinated annual investment survey, EUROSTAT and the national statistical institutes are taking steps to formulate a harmonized method of recording leasing activity. Whereas France already surveys it at a fairly detailed branch level, similar systems in the F.R. of Germany, Luxembourg, the Netherlands and the United Kingdom are still only under development, and are only in preparation in the other Member States. Results are unlikely to be ready before 1989.

Methodological notes

The data refer only to enterprises which employ 20 or more persons and whose principal economic activity is listed in one of the groups 1 to 5 of the 'General Industrial Classification of Economic Activities within the European Communities' (NACE).

The enterprise is defined as the smallest legally autonomous unit.

By fixed assets is meant the value of all new and second-hand capital goods acquired or produced by the enterprise for its own use which have a useful life of more than one year, including additions, alterations, improvements and repairs that extend the normal useful life or increase the productivity of existing fixed assets (major maintenance).

Acquired assets are valued at total cost, i.e. price free destination, plus installation charges and any fees and duties, but excluding financing costs.

The methodological notes are followed by a list of notes dealing chiefly with the aggregation of headings made by the Member States either for technical reasons or, more often, for reasons of statistical confidentiality.

The common value unit used for the presentation of Community data is the European currency unit

The exchange rates of the ECU are given in the following table (1 ECU =):

Year	B	DK	D	F	L	NL	UK
