

Labour Market Latest Trends

- 3rd quarter 2005 data

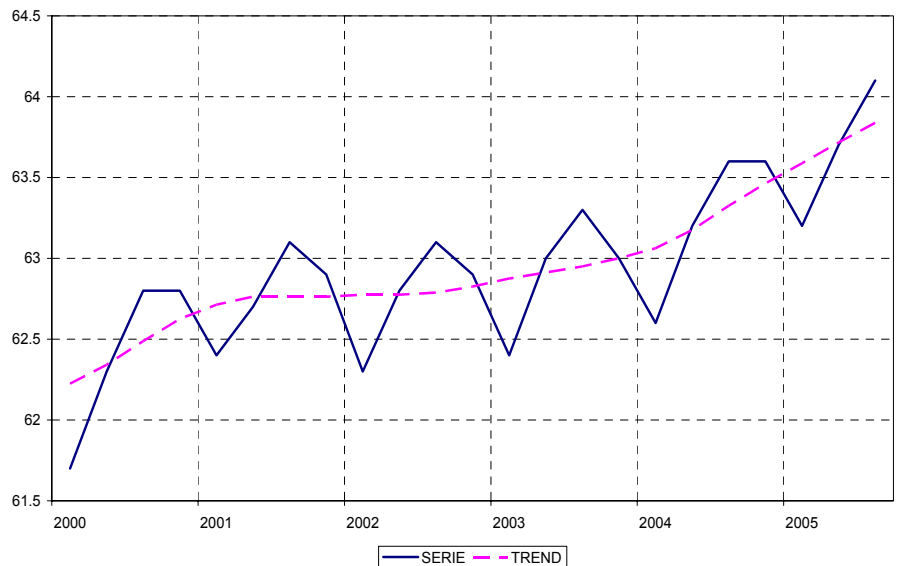

The employment rate continues to rise

This publication is one of a quarterly series presenting the main results of the European Union Labour Force Survey for the EU-25 and for all Member States.

The employment rate in the EU-25 increased by 0.5 percentage points in the third quarter 2005 compared with the same quarter one year before. In the third quarter 2005, 64.1% of the working age population (15-64 years of age) had a job or were engaged in any business activity in the EU-25, compared with 63.6% in the third quarter of 2004. Spain recorded the highest rise of the Member States, from 61.5% to 63.9%¹.

The employment rate series² shows a significant increase since the beginning of 2004 (chart 1).

Chart 1: Evolution of the employment rate (15-64 years) from 2000Q1 to 2005Q3 (%)

Source: Eurostat, EU-LFS

The employment rate rose for both men and women, respectively by 0.4 and 0.5 percentage points in one year. In the third quarter 2005, 71.8% of the men and 56.5% of the women were employed in the EU-25. The highest yearly increases in female employment rate were recorded in Spain (from 48.6% in 2004Q3 to 51.6% in 2005Q3) and in Ireland (from 57.3% in 2004Q3 to 59.3% in 2005Q3).

As a result of the rise in the employment rate, the share of active population (employed plus unemployed people) in the whole population aged 15-64 increased, to reach 70.4% in the 3rd quarter 2005, compared to 69.9% one year before. The unemployment rate did not significantly decrease in this period³ (see chart 2, page 2).

¹ Quarterly data are not yet available for Luxembourg. Breaks in series are mentioned in the methodological notes (page 11).

² The figures come from the Labour Force Survey when data are available; in case of missing data estimates based on national figures are calculated. The trend is calculated at an EU-25 level using moving averages. In this publication, the data have not been adjusted for seasonal variation, due to the shortness of the time series available in some countries

³ The unemployment rate calculated in this paper is directly derived from the Labour Force Survey data. The adjusted unemployment series (15+) published on a monthly basis by Eurostat can slightly differ from these results.

Part-time jobs and temporary contracts on the rise

The increase in employment rates was combined with increased prevalence of part-time employment as well as an increase in the proportion of employees with temporary contracts. The share of part-time employment in total employment showed significant growth between the third quarters 2004 and 2005. In the third quarter 2005, 7.2% of employed men (+0.3 percentage points) and 31.8% of employed women (+0.7 percentage points) worked part-time.

The share of employees with temporary contracts in the EU25 rose also, to reach 14.5% (+0.8 p.p.) of male employees and 15.4% (+0.7 p.p.) of female employees.

This year-on-year increase in part-time and temporary contracts has already been seen in Q1 and Q2.

Chart 2: Changes in labour market indicators from 2004Q3 to 2005Q3 (in percentage points), EU-25

Source: Eurostat, EU-LFS

The percentage of employees with temporary contracts ranged from 2.7% in Estonia to 34.4% in Spain

On average in the EU-25, 14.9% of the employees had a temporary contract in the third quarter 2005. But this average hides disparities by age, economic activity, and by Member State. Firstly, young people (aged 15 to 24 years) are much more likely to have a temporary contract when employed: 43.2% of young employees had a temporary contract, compared with 11.6% of employees aged 25 to 54 years, and 7.4% of employees aged 55 years or more. Secondly, temporary contracts were most prevalent in agriculture (34.6%) and in construction (22.1%). Finally, Chart 3 shows a huge disparity by country: in three Member States (Estonia, Malta and Ireland), this rate was less than 5%; at the other end of the scale, the rate of temporary contracts was higher than 20% in Poland (26.4%) and Spain (34.4%).

Chart 3: Share of employees with temporary contracts, 2005Q3 (%)

Source: Eurostat, EU-LFS

4.9% of employed people in the EU-25 started their job in the past 3 months

The proportion of people whose job started in the past 3 months, is an indicator of worker's mobility and labour market flexibility. The indicator measures both the number of persons changing job in the last 3 months and those newly employed in the same period, after unemployment or inactivity.

In the third quarter of 2005, this indicator reached 4.9% in average in the EU-25. In four countries this rate was over 8%: Spain, Denmark, Sweden and Finland.

Note: Breaks in series are mentioned in the methodological notes (page 11).

The unemployment rate calculated here is directly derived from the Labour Force Survey data. The adjusted unemployment series (15+) published on a monthly basis by Eurostat can differ from these results.

The data for Luxembourg refer to the whole year 2004. The data for Croatia in the 2nd quarter 2005 refer to the 1st half year 2005. The data for Germany in 2004 are not from the LFS. The data for France cover the metropolitan territory (excluding overseas regions). In Ireland and UK, the data refer to seasonal quarter (March to May for q2, June to August for q3).

¹ Number of unemployed persons aged 15-64.

² Confidence limit of the number of unemployed persons aged 15-64, at a level of confidence of 95%, in thousands of people.

Note: Breaks in series are mentioned in the methodological notes (page 11).

The data for Luxembourg refer to the whole year 2004. The data for Croatia in the 2nd quarter 2005 refer to the 1st half year 2005. The data for France cover the metropolitan territory (excluding overseas regions). In Ireland and UK, the data refer to seasonal quarter (March to May for q2, June to August for q3).

¹ Number of persons aged 15-64 years in long-term unemployment.

➤ ESSENTIAL INFORMATION – METHODOLOGICAL NOTES

Source: the European Union Labour Force Survey is a quarterly large sample survey (except in Luxembourg and Switzerland where it is annual, and in Croatia where every survey covers half a year), providing results for the population in private households in the EU, EFTA and the Candidate Countries. Conscripts in military or community service are not included in the results. The sampling rates vary between 0.2% and 3.3%. The survey provides quarterly results on labour participation of people aged 15 and over as well as on persons outside the labour force. The figures in this publication are **not seasonally adjusted**, due to the short times series available.

Respondents answer for a specific week (called "reference week") of the quarter. The reference week starts on Monday and ends on Sunday. In most of the countries providing quarterly data the quarterly sample is spread uniformly over all or most weeks of the quarter.

Breaks in series. Until 2004, German data were based on a Spring Labour Force Survey for the 2nd quarter and on national estimates for other quarters. From 2005, the sample of the German Labour Force Survey is spread over all weeks of the year. Accordingly estimates for 2005 are not fully comparable with previous years. From 2005q2 onwards, Swedish data are derived from a revised questionnaire. In particular students looking for a job and available to work are now considered as unemployed according to EU definitions. Therefore Swedish figures for 2005q3 and 2005q2 are not fully comparable with previous quarters. In the 1st quarter 2005, the Spanish questionnaire has been revised to improve the coverage of small duration jobs and of methods used to find work. The impact of these changes has been estimated at +0.4 percentage point on employment rate (16-64 years old), +0.2 p.p. on activity rate (16-64 years old), and -0.4 p.p. on unemployment rate.

The **concepts and definitions** used in the survey follow the guidelines of International Labour Organisation:

- **The economically active population** comprises employed and unemployed persons.

- **Employed persons** are persons aged 15 and over (Spain, United Kingdom: 16 and over; Denmark, Estonia, Hungary, Latvia, Sweden, Finland: 15-74; Iceland, Norway: 16-74) who during the reference week performed work, even for just one hour per week, for pay, profit or family gain or were not at work but had a job or business from which they were temporarily absent because of, e.g., illness, holidays, industrial dispute and education or training.

- **Unemployed persons** are persons aged 15-74 (in Spain, United Kingdom, Iceland, Norway: 16-74) who were without work during the reference week, were currently available for work and were either actively seeking work in the past four weeks or had already found a job to start within the next three months.

- **Duration of unemployment** is the duration of the search for employment or the length of the period since leaving last job, whichever period is shorter. **Long-term unemployed persons** are persons who have been unemployed for one year or more.

Indicators: Employment/ activity rates represent employed/active persons as a percentage of the same age population. **(Long-term) unemployment rate** represent (long-term) unemployed persons as percentage of the active population of the same age.

All rates focus on the working age population (at most 15-64 years).

Employees are defined as persons who work for a public or private employer and who receive compensation in the form of wages, salaries, payment by results or payment in kind; non-conscript members of the armed forces are also included. Employees with **temporary contracts** are those who declare themselves as having an employment contract or a job which will terminate either after a period fixed in advance, or after a period not known in advance, but nevertheless defined by objective criteria, such as the completion of an assignment or the period of absence of an employee temporarily replaced.

Average actual hours worked in all jobs are the sum of hours in the main and second jobs in the reference week divided by the number of persons who were actually working at least one hour in either main or second job during the reference week. These hours include all hours including overtime, whether paid or not.

The full-time/part-time distinction in the main job is declared by the respondent except in the Netherlands, Iceland and Norway where part-time is determined if the usual hours are fewer than 35 hours and full-time if the usual hours are 35 hours or more, and in Sweden where such criterion is applied to the self-employed.

Persons having a "new" job are persons who have been in their present employment (main job) for less than three months. This should not be confused with the concept of "job creation" as the jobs are only "new" from the perspective of the respondents.

Classification by economic activity: six economic activities are distinguished on the basis of an aggregation of the sections of the Standard Classification of Economic Activities (NACE rev.1).

Level of educational attainment is defined according to the International Classification of Education 1997 (ISCED 1997). Three levels are distinguished: Less than upper secondary (ISCED 1 or 2), upper secondary (ISCED 3-4), and third level (ISCED 5-6).

Confidence limits: All confidence limits are calculated at a level of confidence of 95%. The country limits are derived from coefficients of variation calculated by the National Statistic Institutes. When a coefficient is not available, the coefficient for the last quarter available is taken. For the calculation of limits of aggregates, we assume that the EU-LFS is a stratified sample with the country as the first stratum.

Country codes applied in this publication: EU-25 (European Union), EU-15 (former European Union of 15 Member States), Euro-zone (Belgium, Germany, Greece, Spain, France, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal and Finland), EEA-28 (European Economic Area, including all EU-25 Member States, Iceland and Norway, but without Liechtenstein).

Aggregates: When data are unavailable for a country, the calculation of the corresponding aggregates takes into account the data for the same country one year before.

Symbols: () data between brackets lack reliability due to small sample size; "." dots are used for unavailable or extremely unreliable data. "|" vertical lines are used to indicate breaks in time-series. Quarter 3 of the year 2005 is written as 2005q3.

European Statistical Data Support:

Eurostat set up with the members of the 'European statistical system' a network of support centres, which will exist in nearly all Member States as well as in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site: www.europa.eu.int/comm/eurostat/

A list of worldwide sales outlets is available at the:

Office for Official Publications of the European Communities.
